

CLOTH WEAVING

YARN

The yarn is now ready to be woven into cloth or carpet. The principle is the same for both.

WEAVING PROCESS

Weaving is interlacing two sets of threads at right angles to each other. It is made on a 'loom'. The yarn which runs the length of the fabric is called the 'warp' and the yarn interwoven across the warp is called the 'weft'. This is carried by a 'shuttle'.

Modern looms are computer operated at very high speeds. Several shuttles can build up complicated and interesting patterns.

CARPET

The carpet is ready for distribution.

CLOTH

The cloth is now ready for making into a finished product.
